DETAILED ACTION

This application is a rule 371 continuation of PCT Serial Number PCT/EP97/03253.

Claims 1-21 have been canceled.

Claims 22-44 are currently pending.

Election/Restrictions

1. Applicant's election without traverse of Group I, claims 22-32, in the Paper filed October 22, 2003 is acknowledged.

Applicant's election without traverse of the heavy chain species defined as SEQ ID NO: 58 is acknowledged. Upon further review the species requirement is withdrawn.

Applicant's election without traverse of the light chain species defined as SEQ ID NO: 60 is acknowledged. Upon further review the species requirement is withdrawn.

2. Claims 33-44 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made without traverse in the Paper filed October 22, 2003.

Accordingly, claims 22-32 are the subject of examination in the present Office Action.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 22 and 25-32 are rejected under 35 U.S.C. 102(b) as being anticipated by Dziegiel et al (J. Imm. Meth. [1995] 182:7-19; AO on form PTO-1449 filed March 1, 1999).

Dziegiel teaches a purified polypeptide that binds to the rhesus D erythrocyte surface antigen (Abstract in particular). Dziegiel teaches that the polypeptide is an Fab fragment [claim 25] of an immunoglobulin comprising both V_H and V_L regions that specifically binds to Rhesus D antigen (page 10, paragraph bridging columns in particular)[claim 26]. Accordingly, the polypeptide satisfies the metes and bounds of the limitation in claim 22 that the polypeptide is "a functional variant" of SEQ ID NO: 58. Applicant is reminded that the "function" of any antibody is to bind to an antigen. Accordingly, any

Art Unit: 1644

antibody that binds to rhesus D antigen polypeptide satisfies the metes and bounds of the limitation "functional variant" in the claim. Dziegiel teaches that the antibody was engineered from a monoclonal human antibody of the IgG1 subclass (page 10, paragraph bridging columns in particular)[claim 27]. Dziegiel teaches that the nucleic acid sequences encoding the immunoglobulin fragment were obtained using standard methods (page 14, first paragraph of first column in particular)[claim 28]. Dziegiel teaches the formulation of the Fab polypeptides in phosphate-buffered saline, a pharmaceutically acceptable carrier (page 14, second paragraph of first column in particular)[claims 29-30]. Dziegiel teaches that the Fab can be used for typing rhesus D antigen (Table 4 in particular)[claims 31-32]. The prior art teaching anticipates the claimed invention.

Information Disclosure Statement

4. The information disclosure statement filed March 1, 1999 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each U.S. and foreign patent; each publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. Copies of references AB-AM and AQ-AT were not provided and the citations thereof have been lined through on form PTO-1449 as not considered. Copies of references AA, AN-AP, AU and AV on form PTO-1449 have been received and marked as considered. Applicant should submit copies of references AB-AM and AQ-AT along with a new form PTO-1449 listing them for consideration in the present application.
